TASK C

User 02 : as a user,I want swicth between buyer and seller so that i can use both role

Scenario 1: Switch to seller mode successfully

- Given a log in user whose seller identity verification is approved
- When the user clicks "Switch to Seller"
- Then the system shows the seller dashboard

Scenario 2: Identity not verified (rejected)

- Given a log in user whose identity verification is not completed
- When the user clicks "Switch to Seller"
- Then the system stays in buyer mode and shows the message "Please complete identity verification to sell"

Scenario 3: Switch back to buyer mode

- Given a user currently in seller mode
- When the user clicks "Switch to Buyer"
- Then the system shows the buyer home page

TASK C

User 05 :as a buyer, I want to edit and delete my product so that i can manage the product

Scenario 1: Edit product successfully

- Given a seller has a listing product priced at 500 THB
- When the seller changes the price to 450 THB and clicks "Save"
- Then the system saves the change and the product page displays 450 THB

Scenario 2: Delete product successfully

- Given a seller has a listing with no pending orders
- When the seller clicks "Delete" and confirms
- Then the system removes the listing from search results and the seller's product list

Scenario 3: Invalid edit (rejected)

- Given a seller is editing a product
- When the seller enters a price of 0 or leaves the price empty and clicks "Save"
- Then the system does not save the change and shows the error "Price must be greater than 0"

Scenario 4: Delete product with an existing order (rejected)

- Given a buyer has already placed an order for the product
- When the seller clicks "Delete"
- Then the system does not delete the listing and shows the message "This product has an existing order cannot be deleted"

TASK C

User 07 :as a buyer, I want add product to the cart so that i can purchase items.

Scenario 1: Product added successfully

- Given the product (size M, black) has 3 items in stock
- When the buyer selects size M, black, 1 unit and clicks "Add to cart"
- Then the system adds 1 item to the cart and the cart badge increases by 1

Scenario 2: Product is out of stock (rejected)

- Given the product (size M, black) has 0 items in stock
- When the buyer clicks "Add to cart"
- Then the system does not add the item and shows the message "Out of stock"

Scenario 3: No size selected (invalid)

- Given the buyer has not selected a size
- When the buyer clicks "Add to cart"
- Then the "Add to cart" button is disabled and cannot be clicked
